

### **Range Preparation (Set up according to TYRO shoot):**

1. Ensure that shooter has secure holster and at least 1 spare magazine and total of 24 rounds of ammunition.
2. Shooter is positioned, lining up with the middle target @ 10 yards.
3. Shooter is stationary at all times.
4. Shooter should know the course of fire and memorize it.
5. No loaded guns allowed on the range, until instructed to load by RO.
6. Tell the shooter what the commands are beforehand.

Once a shooter presents himself on the firing line, the shooter declares that the exercise is understood and that he/she is competent – ready to be tested.

### **TYRO SHOOT**

#### **Range commands:**

- 1 "Load and make ready". (Safely load gun, pointing downrange at all times and holster.)  
(Shooter lifts both hands above shoulder level, indicating he is ready.)
- 2 "Standby".
- 3 Beeper/whistle sounds within 1 - 5 seconds. (Shooter draws gun and fires at target.)
- 4 Shooter holsters gun after every string shot.
- 5 Repeat from No. 2.
- 6 When the whole exercise is done, unload and show clear. (Shooter presents empty gun with magazine removed or rounds/cases in revolver removed.)
- 7 Holster gun.
- 8 The range is then declared safe. (May move forward but shooter may not touch target.)
- 9 Score and patch.

The main aim of the shoot is to see if the shooter is **competent in handling the gun!**

Any **unsafe** handling disqualifies the shooter immediately (for example; pointing in an unsafe direction, or trigger on finger, or accidental discharge).

He/she will unload and present safe, to return another day!
